Admin & operations

DOCUMENT PURPOSE

What this platform delivers

Sea World Holidays is a bilingual travel-commerce and operations platform. It gives customers one place to discover destinations, cities, tours and travel packages; check real availability; book as a registered customer or guest; track bookings; and share verified travel reviews. Behind the public experience, administrators and agents manage the content, inventory, customers, work assignments, bookings, quotations, invoices and service vouchers that keep the travel operation moving.

Core business value: the platform connects attractive destination content with a practical booking journey and an internal operations workspace. Customers receive clarity and convenience; the agency gains control, traceability, reusable data and a scalable foundation for future online payments.

Customer value

Easy discovery, clear itineraries and inclusions, localized content, currency-aware pricing, availability checks, flexible sign-in or guest booking, booking history and reviews.

Sales value

Promoted tours and packages, discount campaigns, related-tour recommendations, direct contact channels, lead capture, quotations and polished PDF documents.

Operations value

Central management of travel products, customers, tasks, bookings, flights, hotels, quotations, invoices, vouchers and customer questions.

Scope note: this guide distinguishes implemented transactional features from presentation-only pages. A live payment-provider checkout is not currently wired into the reviewed application. It can be added on demand as a controlled integration phase; see "Payment gateway readiness."

Payment gateway readiness

Platform-wide customer value

Complete action reference

The customer journey, step by step

1. Arrive in the right language and currency

Every public route is language-prefixed using `/en/...` or `/ar/...`. Selecting Arabic changes the content and the complete layout direction to RTL. The currency menu lets a visitor view supported prices in USD or EGP, using centrally managed exchange-rate logic.

2. Discover travel options

The visitor can use the global search box or browse destination, city, tour, Nile cruise and package menus. Home-page sections surface featured inventory and travel stories. Search results are grouped into destinations, tours and packages and lead directly to the relevant page.

3. Narrow the choice

Tour and package lists support date-based filtering, filter application and reset, page-size choice and pagination. Cards expose names, imagery, summaries, prices and active discounts. Destination and city pages provide geographic context and show relevant tours.

4. Build confidence on the detail page

Customers see a photo gallery, overview, duration, group/capacity information, price, itinerary timeline, highlights, included and excluded services, cancellation information where available, traveler reviews and related choices.

5. Configure the booking

The booking card collects the travel date or date range plus adult and child counts. It displays available dates, seat limits, price per adult/child, discounts and the calculated total before submission.

6. Confirm availability before commitment

Check Availability validates dates, party size and inventory. The customer receives an available/unavailable state and an available-seat count where applicable. Any booking-field change resets the previous availability result so stale availability is not reused.

7. Choose the identity path

A registered customer selects **Sign In**. The platform remembers the exact tour or package URL and returns to it after successful login. A visitor can alternatively select **Book as a Guest** and provide first name, last name, email and mobile number.

8. Create the booking

Book Now or **Submit Guest Booking** sends the validated product, dates and traveler counts. Loading, success and error feedback prevent duplicate submissions and make the result clear.

9. Track service progress

Signed-in customers open **My Bookings** to see booking reference, product, date, travelers, amount, status and a link back to the booked tour/package. Operations staff can assign an agent and progress the booking through confirmation, completion or cancellation.

10. Complete the feedback loop

After an eligible booking is completed, the customer can select a 1-5 rating, write a review and submit it. Approved product reviews appear on tour and package detail pages, strengthening trust for future customers.

Global navigation and controls

Control	What it does	Customer value
Sea World Holidays logo	Returns to the home page.	A predictable route back to the main discovery experience.
Search	Searches destinations, tours and packages after a short typing delay; results are grouped by type.	Fast access without navigating through several lists.
Clear Search	Clears the entered term and closes results.	Quickly starts a new search.
Destinations menu	Expands destinations, their cities and nested tours; includes View All Destinations.	Browse by place and progressively narrow the trip.
Nile Cruises / Tours menu	Surfaces tour choices and a route to the full relevant catalogue.	Direct access to high-value travel products.
Packages menu	Shows package shortcuts and View All Packages.	Find bundled holidays with less effort.
Currency menu	Changes displayed prices between supported currencies, including USD and EGP.	Removes mental conversion and improves price clarity.
Language menu	Switches between English and Arabic and retains a localized route where possible.	A true bilingual experience with Arabic RTL layout.
Account menu	Shows Sign In when logged out; shows identity, Configuration access when authorized, My Bookings/Profile and Sign Out when logged in.	One consistent account entry point.
Mobile menu	Opens the responsive navigation, catalogue, currency, language and account controls.	The same core journey remains usable on mobile.
Breadcrumbs	Shows the localized page hierarchy and clickable parent pages.	Orientation and quick backtracking on deep catalogue pages.
Footer links	Links to About, Blogs, Destinations, Packages and Contact.	Persistent access to company, inspiration and support content.
Email / Call / WhatsApp / social links	Launches the relevant direct-contact channel.	Customers can move from self-service to human support.
Newsletter Subscribe	Validates and submits an email address.	Supports retention and future campaign engagement.
Payment-method badges	Displays the accepted payment brands communicated by the business.	Sets payment expectations; live checkout integration is a separate phase.

Every discovery and product page

Page and route	What customers see	Buttons and actions	Value
Home /{lang}/home	Promotional hero slides, featured destinations, tours, packages, travel stories, agency statistics and trust content.	Hero call-to-action; slide navigation; destination/tour/package cards; Explore More; blog previous/next and Read More; retry controls if content fails.	Turns a first visit into guided inspiration and exposes the breadth of the agency.
Destinations /{lang}/destinations	Paginated destination cards with image, name and description.	Open destination; image previous/next where a card has a gallery; retry; page-size selector; pagination.	Lets customers begin with “where” before choosing a product.
Destination detail /{lang}/destinations/:routeName	Destination gallery, description, available cities and relevant tours.	Back to Destinations; open or navigate gallery images; tour carousel previous/next; select a city; open a tour.	Combines inspiration with direct conversion paths.
City detail /{lang}/cities/:routeName	City overview and top tours available in that city.	Book Now / open tour; tour cards; back navigation after an error.	Provides local context and quickly links the customer to bookable inventory.
Tours list /{lang}/tours	Search/filter panel and paginated tour cards.	Destination search; From/To date pickers; Apply Filters; Reset; retry; open tour; page-size selector; previous/next/page buttons.	Makes a large tour catalogue easier to compare.
Nile cruises /{lang}/nile-cruises	The tour catalogue experience restricted to Nile cruise inventory.	The same filter, reset, card and pagination actions as Tours.	Creates a focused landing and shopping experience for a strategic product category.
Tour detail /{lang}/tours/:routeName	Title, destination, discount, image gallery, overview, itinerary, highlights, inclusions/exclusions, booking card, related tours and reviews.	Open Photos; image selection/close; Check Availability; Sign In; Book as Guest; Book Now; related previous/next; open related tour; rating stars and Submit Review when eligible.	Answers purchase questions on one page and keeps booking in context.
Packages list /{lang}/packages	Filterable, paginated packages with images, summaries, discounts and prices.	Destination search; From/To dates; Apply Filters; Reset; gallery previous/next; open package / Book Now; retry; page size and pagination.	Helps customers compare bundled experiences and see promotional savings.
Package detail /{lang}/packages/:routeName	Gallery, duration, group size, price, overview, itinerary, highlights, inclusions/exclusions, tours	Open Photos; gallery selection/close; open included tour; Check Availability; Sign In;	Explains a multi-part holiday clearly and supports

Page and route	What customers see	Buttons and actions	Value
	inside the package, booking and reviews.	Book as Guest; Book Now; review controls.	booking without leaving the page.
Blogs <code>/lang/blogs</code>	Published travel stories with image, date, title and summary.	Read More / open article.	Builds organic discovery, expertise and customer confidence.
Blog detail <code>/lang/blogs/:routeName</code>	Structured article content and an image gallery.	Open image viewer; previous/next image; select thumbnail; close viewer.	Creates an engaging research experience and supports SEO content.

Tour and package booking in detail

Booking-card element	Behavior	Why it matters
Available date range	Shows the product's bookable date window. One-day tours show one travel date; multi-day products show From and To.	Prevents avoidable date mistakes.
Adult / Children inputs	Accept whole, non-negative traveler counts with at least one adult.	Accurate capacity and pricing.
Seat availability	Shows seat limits and highlights when requested travelers exceed inventory.	Sets realistic expectations before submission.
Price summary	Shows price per adult, child pricing where configured, original price and percentage discount, traveler count and calculated total.	Transparent purchase decision.
Check Availability	Validates the form and calls public availability logic. The button shows a loading state and the result can be Available or Unavailable.	A deliberate verification step reduces failed booking attempts.
Sign In	Opens login with a safe return URL. Successful login returns to the same tour/package, including query parameters and fragments.	Removes the common "lost product after login" frustration.
Book as a Guest	Opens a modal for first name, last name, email and mobile.	Reduces account-creation friction for customers ready to book.
Close guest dialog	Closes by the X control or backdrop when a submission is not active.	Safe cancellation without accidental interruption during submission.
Submit Guest Booking	Validates contact data and creates a guest booking with the selected product, dates and party.	Captures a qualified sale and the information needed for follow-up.
Book Now	Creates the booking for an authenticated customer after availability is confirmed.	Connects the booking to the customer account and booking history.

After authentication: a customer who came from a tour or package returns to that exact page. Signing out on a public page leaves the customer on the same page; signing out from Configuration redirects to the localized home page.

Authentication and customer account pages

Page	Fields and information	Buttons and actions
Sign In <code>{lang}/login</code>	Email and password with validation and submission feedback.	Show/Hide Password; Forgot Password; Sign In; Sign Up; logo/Home.
Sign Up <code>{lang}/signup</code>	First/last name, mobile, email, date of birth, gender, passport number, password, confirmation and terms acceptance.	Show/Hide Password; Show/Hide Confirmation; accept Terms; Create Account; return to Sign In; logo/Home.
Activation <code>{lang}/account/activate</code>	Account activation progress, success or failure state.	Return to Sign Up when activation cannot be completed; logo/Home.
Sign-up Success <code>{lang}/signup-success</code>	Successful registration message and next step.	Continue to the context-appropriate destination, normally Sign In.
Forgot Password <code>{lang}/forgot-password</code>	Email entry and recovery-request status.	Submit recovery request; Sign In; Back to Home; logo/Home.
Reset Password <code>{lang}/reset-password</code>	New password and password confirmation with validation.	Show/Hide Password controls; Reset Password; Back to Home.
My Bookings <code>{lang}/user-booking</code>	Paginated booking records, product, date, travelers, amount, status and eligible review form.	View product; choose rating; enter review; Submit Review; page size; Previous / Next.
Account Settings <code>{lang}/user-setting</code>	Personal details and password-change forms.	Save Personal Details; show/hide old, new and confirmation passwords; Change Password.
Account side panel	Profile photo and account navigation.	Upload/Change image; Remove image; My Bookings; Settings; Sign Out.
Payment Methods <code>{lang}/user-payment</code>	A payment-method presentation screen and add-card dialog.	Delete sample method; Add Payment Method; close dialog; Add Card. This page is presentation-only until a secure gateway/tokenization service is integrated.
User Invoice <code>{lang}/user-invoice</code>	An invoice-layout presentation screen.	Terms link and contact links. The reviewed page contains demonstration invoice data rather than customer-bound live data.

TRUST AFTER TRAVEL

Bookings and verified reviews

1

Eligibility

The system checks that the booking matches the product, is completed and is eligible for review.

2

Customer input

The traveler selects 1-5 stars and writes a required comment up to the configured length.

3

Trust signal

Saved reviews contribute to the product's aggregate rating and visible traveler feedback.

Customers can review from My Bookings and, when eligible, directly on the product detail page. Submission controls prevent incomplete ratings or empty text, provide a saving state, and remove the form after a successful review so the same booking is not reviewed repeatedly.

Content, help and contact pages

Page	Purpose	Actions
About Us /{lang}/aboutus	Introduces the agency, mission, vision, services, differentiators, commitment, activity statistics, team and testimonials.	Home breadcrumb and standard navigation/contact actions.
Contact /{lang}/contact	Captures a customer question with first/last name, phone, email and message; also presents contact details and map access.	Send Message; call; email; View on Google Map; close map.
Help Center /{lang}/helpcenter	Starting point for support topics.	Search; navigate to help topics and home.
FAQs /{lang}/helpcenter-faqs	Answers common customer questions, including payment-related topics.	Expand/collapse FAQ items; return to Help Center or Home.
Guides & Support /{lang}/helpcenter-guides	Presents guidance resources.	Open guidance items; return to Help Center or Home.
Support Request /{lang}/helpcenter-support	Provides a dedicated support-request experience.	Submit support information through the embedded support component.
Terms /{lang}/terms	Displays terms of service.	Breadcrumb navigation and standard site links.
Privacy /{lang}/privacy	Displays the privacy policy.	Breadcrumb navigation and standard site links.
Not Found	Handles invalid or unavailable routes.	Guides the visitor back into the valid site experience.
Exit/contact overlay	Offers human help through phone and social channels when the exit prompt is active.	Call; WhatsApp; Instagram; Facebook; close/continue.

Administration and role-based access

Configuration is the operating center behind the customer website. It is protected by authentication and an Admin/Agent role check. The workspace uses localized navigation and responsive table/grid views, making the same records manageable from different screen sizes.

Administrator

Broad management across catalogue content, customers, assignments, bookings, supporting inventory, commercial documents and customer messages.

Agent

Operational access according to the API's authorization, including assigned work and task notifications. Customer assignment is automatic for agent-created customers.

Customer

No Configuration access. Customers use public pages, their booking history, settings and eligible review tools.

Administration header controls

[Language EN / AR](#)[Notifications](#)[Mark all as read](#)[View all tasks](#)[Account menu](#)[My Bookings](#)[Sign Out](#)[Mobile menu](#)[View Website](#)

Agents receive task notifications and can mark one or all notifications as read. Signing out from any Configuration page clears the session and redirects to the localized home page, ensuring protected operational screens are not left displayed.

Catalogue and content administration

Area	What is managed	Major buttons and actions
Destinations	English/Arabic names, route name, short/full descriptions, active state, multi-image gallery, cover image and localized alt text.	Show/Hide Add; switch Table/Grid; View Preview; gallery previous/next/thumbnail; activate/deactivate; Edit; Delete; Choose Images; set/reorder cover where offered; Remove Image; Save; Cancel; page size/pagination.
Cities	Destination relationship, bilingual name/description, route name, image and active state.	Show/Hide Add; Table/Grid; activate/deactivate; Edit; Delete; Choose Image; Remove Image; Save/Update; Cancel; page size/pagination.
Tours	Destination/city, bilingual titles and descriptions, route, dates, prices, one-day/Nile Cruise flags, duration, capacity, inclusions, exclusions, highlights, cancellation policies, images and hierarchical itinerary.	Show/Hide Add; Table/Grid; Preview; active toggle; Discount; Edit; Delete; multi-step Previous/Continue/Finish; Add/Remove list item; Choose/Remove images; Add Step; Add Child; Edit/Delete itinerary step; Save Step; Cancel; pagination.
Packages	Bilingual package details, destinations, dates, adult/child pricing, capacity, highlights, inclusions/exclusions, cancellation policies, images, itinerary and tours within the package.	Show/Hide Add; Table/Grid; Preview; enlarge gallery; active toggle; Discount; Edit; Delete; multi-step navigation; image management; Add/Edit/Delete itinerary steps; Save/Cancel; pagination.
Discount Manager	Percentage, start/end dates, current and historic promotion periods, queued customer notifications.	Create Discount; Start New Period; Cancel Restart; Refresh History; Notify Customers; Stop; Restart; Close.
Blogs	Bilingual title, summary and structured content sections, heading level, publish date, route name, images and localized alt text.	Show/Hide Add; Table/Grid; active/published toggle where available; Add/Delete Content Section; Choose/Remove Images; Edit; Delete; Save/Update; Cancel; pagination.

Customer, booking and service operations

Area	What is managed	Major buttons and actions
Customers	Lead traveler, individual/couple/family/company type, contact/passport details, agent assignment and companion travelers including spouse, adult, child, infant and babysitter.	Show/Hide Add; Table/Grid; activate/deactivate; Add Spouse/Adult/Child/Infant/Babysitter; Remove Traveler; Edit; Delete; Save/Update; Cancel; pagination.
Tasks	Task title, description, type, priority, status, due date and assigned agent.	Show/Hide Add (Admin); Table/Grid; Edit; Start Task; Finish Task; Close Task; Return Task; Save/Update; Cancel; pagination. Agent completion notes are shown where relevant.
Bookings	Booking ID, customer/contact, tour/package, assigned agent, date, travelers, amount, cancellation fee and status.	Filter by Status; Table/Grid; Assign Agent (Admin); Assign and Notify; Confirm Booking; Complete Booking; Cancel Booking; close/done assignment dialog; page size/pagination.
Airlines	Airline name, code, logo and active status.	Show/Hide Add; Table/Grid; active toggle; Edit; Delete; choose/remove logo; Save/Update; Cancel; pagination.
Hotels	Name, destination, star rating, address, phone, email, website, description and active status.	Show/Hide Add; Table/Grid; active toggle; Edit; Delete; Save/Update; Cancel; pagination.
Flights	Flight number, airline, departure/arrival airports and times, price, available seats, class and status.	Show/Hide Add; Table/Grid; airport-search option selection; active toggle; Edit; Delete; Save/Update; Cancel; pagination.
Customer Questions	Customer name, phone, email, question, submission date and read status.	Refresh; Table/Grid; filter All/Read/Unread; Mark as Read; Delete; page size/pagination.

Commercial document operations

Area	What is managed	Major buttons and actions
Quotations	Customer, travel dates, validity, currency, selected tours/packages/hotels/flights, travelers, rooms/nights, transfers, policies, tax, discount, notes and calculated totals.	Create/Hide Form; Table/Grid; select/remove travel item; Add/Remove Transfer; Add/Remove Policy; Edit; Duplicate; Change Status; Download PDF; Delete; Retry Options; Save/Update; Cancel; pagination.
Invoices	Customer, currency, invoice/due dates, catalogue services, line descriptions, quantities, unit prices, line discounts, transfers, notes, invoice discount, tax and server-calculated totals.	Create/Hide Form; Retry Options; select service; Remove Item; Add/Remove Transfer; Save/Update; Cancel; Edit; Download PDF; Delete.
Vouchers	Customer, service date/end date, voucher/service type, linked quotation service or transfer details.	Create/Hide Form; Retry Options; choose type/service; Save/Update; Cancel; Edit; Download PDF; Delete.

Operational chain: the same controlled data can move from customer profile to quotation, from quotation to invoice/voucher, and from booking to agent assignment and completion. PDF export supports professional documents outside the system.

Payment gateway readiness - available on demand

The platform is structurally ready for an online payment phase because it already knows the customer, product, travel dates, booking total, currency, quotation, invoice and booking status. A gateway can therefore be introduced without redesigning the discovery and booking experience.

What exists today

The public footer communicates accepted methods such as Mastercard, Visa, PayPal, InstaPay and Cash. The account area contains a payment-method UI. These elements do not, by themselves, constitute a secure live gateway.

What an on-demand gateway phase would add

1. **Provider selection:** choose the gateway based on Egypt/international coverage, supported currencies, fees, settlement, refunds, recurring/tokenized cards and 3-D Secure requirements.
2. **Secure checkout:** create a server-side payment session from a validated booking or invoice and redirect/embed the provider's PCI-compliant payment experience.
3. **Payment states:** Pending, Authorized/Paid, Failed, Cancelled, Refunded and Partially Refunded, linked to booking and invoice records.
4. **Webhook verification:** accept signed provider callbacks so payment status is reliable even if the customer closes the browser.
5. **Receipts and notifications:** show confirmation, update My Bookings, produce receipts and notify the customer/assigned agent.
6. **Admin controls:** filter payments, inspect transaction IDs, reconcile totals, initiate allowed refunds and export records.
7. **Failure recovery:** retry payment without duplicating the booking and preserve inventory according to an agreed reservation window.
8. **Security and compliance:** never store raw card numbers or CVV; rely on provider tokenization, least-privilege secrets, audit logging and environment-specific configuration.

Commercial statement: online gateway integration is available on demand and should be estimated after the provider, countries, currencies, refund policy and booking-reservation rules are selected.

Platform-wide customer and business value

Bilingual by design

English and Arabic routes, translated interface text and RTL support make the same product accessible to two core audiences.

Responsive experience

Desktop and mobile navigation, flexible cards, grid/table admin views and mobile-friendly booking keep journeys usable across devices.

Search and discovery

Grouped search, destination hierarchy, filtered lists, related tours and editorial stories create several routes from interest to booking.

Price clarity

Centralized currency formatting, USD/EGP conversion, child pricing, discount display and totals provide consistent price communication.

Trust and SEO

Server-rendered metadata, canonical/hreflang support, structured data and visible breadcrumbs improve search visibility and clarity.

Operational continuity

Customer, booking, task and document records prevent the public booking experience from becoming an isolated lead form.

Flexible conversion

Customers can sign in and return to the product or continue as guests, reducing abandonment at the identity step.

Human support

Email, phone, WhatsApp, social links, contact questions and help content make assistance visible throughout the experience.

Growth foundation

Promotions, notifications, reviews, PDFs and payment readiness provide clear expansion paths without replacing the core platform.

Representative end-to-end operating workflows

Workflow	Connected steps	Outcome
Catalogue to booking	Admin publishes destination/city/tour/package → customer discovers it → checks availability → books.	Content becomes measurable commercial inventory.
Booking to service	Booking received → Admin assigns agent → agent is notified → booking confirmed/completed/cancelled.	Clear ownership and status visibility.
Completion to advocacy	Booking completed → review becomes eligible → customer rates and comments → review appears on the product.	Verified customer experience supports future sales.
Tailored sale	Customer profile → travel items and transfer added to quotation → PDF sent → invoice and voucher generated.	Supports bespoke travel beyond fixed online packages.
Inquiry to follow-up	Customer submits question → admin filters unread requests → marks handled or removes obsolete records.	No inquiry needs to remain buried in a generic mailbox.

Complete action reference

Actions are shown only when relevant to the current state, role or available data. For example, booking buttons change after availability succeeds, review submission appears only for an eligible completed booking, and agent assignment is an administrator action.

Context	Buttons / controls	Result
Navigation	Logo, Destinations, Tours/Nile Cruises, Packages, Search result, Currency, English, Arabic, Account, Mobile Menu	Navigate, search, localize or open menus.
Lists and cards	Open Card, Book Now, Apply Filters, Reset, Retry/Show More, Previous, Next, Page Number, Page Size	Open products, refine results, recover loading and paginate.
Media	Photos, Previous Image, Next Image, Thumbnail, View Larger Image, Close	Inspect or dismiss galleries and previews.
Booking	Date Picker, Adult/Child Count, Check Availability, Sign In, Book as Guest, Close, Submit Guest Booking, Book Now	Validate availability and create a registered or guest booking.
Reviews	1-5 Stars, Review Text, Submit Review	Create feedback for an eligible completed booking.
Authentication	Show/Hide Password, Sign In, Sign Up, Forgot Password, Reset Password, Back Home, Activate/Continue	Create, access or recover an account.
Account	Upload/Change/Remove Photo, My Bookings, Settings, Save Details, Change Password, View Product, Sign Out	Maintain identity and review personal travel records.
Contact	Send Message, Call, Email, WhatsApp, Instagram, Facebook, View Map, Newsletter Subscribe	Start or continue human assistance and engagement.
Admin shared	Show/Hide Add Form, Table/Grid, Add, Save, Update, Cancel, Edit, Delete, Active Toggle, Refresh, Retry, Page Size, Pagination	Standard create/read/update/status/delete workflow.
Catalogue admin	Preview, Gallery Controls, Choose/Remove Image, Set Cover, Add/Remove Included/Excluded/Highlight/Policy, Previous/Continue/Finish, Add/Edit/Delete Step, Add Child	Build complete bilingual travel products and content.
Promotions	Discount, Create, Notify Customers, Stop, Restart, Cancel Restart, Refresh History	Schedule and operate promotion periods.
Customers	Add Spouse, Adult, Child, Infant, Babysitter; Remove Traveler; Assign Agent	Model the full traveling party and ownership.
Tasks	Start, Finish, Close, Return, Mark Notification Read, Mark All Read, View All Tasks	Progress and acknowledge operational work.
Bookings	Filter Status, Assign and Notify, Confirm, Complete, Cancel, Done	Move a booking through its service lifecycle.
Quotations	Select/Remove Travel Item, Add/Remove Transfer, Add/Remove Policy, Duplicate, Change Status, Download PDF	Compose, reuse, progress and distribute tailored offers.
Invoices	Select Service, Remove Line, Add/Remove Transfer, Edit, Download PDF, Delete	Create itemized billing documents with discounts, tax and totals.
Vouchers	Choose Voucher Type/Service, Edit, Download PDF, Delete	Create and distribute service confirmation documents.

Context	Buttons / controls	Result
Customer Questions	All/Read/Unread Filter, Mark as Read, Delete, Refresh	Process inbound inquiries.

In one sentence: Sea World Holidays gives customers a clear path from inspiration to service and gives the agency the operational tools to fulfill, document and grow every travel sale.

Prepared from the Angular application routes, templates and implemented interaction logic available in the SeaWorld.TravelAgency repository on 14 September 2026. Actual API permissions, production data, third-party contracts and deployment configuration may further constrain or extend the behaviors described here.
